# LDAP SERVICE

My project is about to explain some basic and advance functions of openldap.

LDIF structure like this one

Process of project

In this project I use different docker make different type of ldap server to make easy to understand configure and concept.

* Basic ldap server and explain about schema.

* Consumer and provider server function (Replication).

* Idab_master and ldap_sub server information(Subordinate).

* Connection of tls use openssl.

* Configure of clients to connect by using pam and httpd server.
